

Danny Liven

Software Engineer · Backend Developer

Bachelor of Computer Science

livenesswoyo@gmail.com

SUMMARY

Software Engineer with 3 years of experience building scalable backend and microservice-oriented systems using .NET, Go, Spring Boot, and FastAPI. Experienced in API gateway design, secure authentication, distributed messaging, audit logging, and frontend development using Vue.js and Angular. Proven track record in implementing background processing, complex reporting systems, high-volume data pipelines, and CI/CD pipelines. Familiar with core deployment and infrastructure concepts including Docker, Kubernetes, SSH-based server communication, and application monitoring via Rancher. Comfortable working in both onsite and remote environments.

PROFESSIONAL EXPERIENCE

Software Engineer

PT. Indocyber Global Teknologi · 3 Years · Onsite & Remote

Backend Development

- Microservice Architecture & API Gateway:** Developed distributed systems using C# and .NET with YARP (Yet Another Reverse Proxy) for API gateway implementation to manage request routing and service abstraction across multiple services.
- Backend Development with FastAPI:** Built lightweight and high-performance RESTful APIs using FastAPI (Python), leveraging its automatic Swagger/OpenAPI documentation generation, Pydantic-based request validation, and async support for efficient I/O-bound operations.
- High-Volume Data Processing & Performance Optimization (Go):** Optimized a high-traffic application handling continuous large-scale Excel uploads (~1 million rows per file), scaling to over 513 million records in a single table within 3 months. Performed performance tuning to pass strict penetration testing standardization requirements, and implemented caching strategies to accelerate summarization and reporting displays under heavy load.
- Authentication & Security:** Designed secure authentication layers using JWT cookies, session storage approaches, auth guards, and interceptor-based token injection across backend services.
- Advanced Logging & Auditing:** Implemented comprehensive auditing using Serilog and NLog middleware in .NET. Configured dual-sink logging to capture general events in files while routing sensitive audit data to databases for compliance and security tracking.
- Background Job Processing:** Built scheduler and background processing pipelines using Hangfire (.NET) for automated tasks, report generation, and data processing workflows.
- Reporting & Recapitulation:** Developed scoring and Excel-upload-oriented systems for reporting and data recapitulation using Go and Gin framework.

Data, Messaging & Infrastructure

- Caching & Messaging:** Integrated Redis for caching to reduce database load and RabbitMQ for asynchronous inter-service communication and event-driven processing.
- Database & ORM:** Worked with PostgreSQL and Microsoft SQL Server using Entity Framework Core and GORM for database abstraction, query optimization, and schema migration management.
- Server Access & Query Management:** Used SSH to connect to and manage remote servers, and the psql CLI to run and troubleshoot queries directly against production databases.
- Backup Automation:** Created shell scripts for automated database backup, scheduling, and maintenance processes.
- Deployment & Monitoring Concepts:** Working knowledge of containerization and orchestration concepts such as Docker and Kubernetes, and CI/CD-driven deployment workflows. Monitored application health and performance via Rancher.

Frontend & DevOps

- Frontend Development with Vue.js:** Developed responsive and modular frontend interfaces using Vue.js, implementing component-based architecture, Vue Router for SPA navigation, Pinia/Vuex for state management, and Axios for API integration with backend services.
- Frontend Development with Angular:** Built enterprise-grade frontend applications using Angular with standalone components, lazy loading, route guards, interceptors, reactive forms, and Angular Signals for state management and scalable application structure.
- Version Control & CI/CD:** Proficient in Git workflows across GitHub and GitLab, managing the full lifecycle of Merge/Pull Requests including code reviews, conflict resolution, and automated CI/CD pipeline flows for seamless deployment.

TECHNICAL SKILLS

Languages	C# · Go · Java · Python · TypeScript · Bash
Backend Frameworks	ASP.NET Core · Gin (Go) · Spring Boot · FastAPI (Python) · YARP
Auth	JWT · Cookie-based Auth · Session Storage · Role-based Access
Logging & Jobs	Serilog · NLog · Dual-sink Audit Logging · Hangfire
Architecture	Microservices · API Gateway · Clean Architecture · RESTful API
Databases	PostgreSQL · Microsoft SQL Server (SSMS)
ORM	Entity Framework Core (.NET) · GORM (Go) · SQLAlchemy (Python)
Messaging	RabbitMQ
Caching	Redis
Frontend	Vue.js (Vue Router, Pinia/Vuex, Composition API) · Angular (Standalone Components, Signals, Guards, Interceptors, Lazy Loading)
Deployment & Infra Concepts	Docker · Kubernetes (familiar with concepts) · CI/CD Pipelines · SSH · psql (CLI) · Rancher (Monitoring)
DevOps / Tools	GitHub · GitLab · Shell Scripting · Postman · SSMS

EDUCATION

Bachelor of Computer Science

Bina Nusantara University

ADDITIONAL SKILLS

- **Game Development (Unity Engine):** Using C# for game logic; proficient in general game physics, animation, and 3D modeling.
- **Leadership & Project Management:** Managed high-scope events up to the Asia continental level. Focused on talent development and management, acting as Project Manager for competitive teams.
- **Focus Areas:** Backend Development, Microservices Architecture, API Gateway Design, High-Volume Data Processing, CI/CD Integration, Audit Logging, Frontend Integration, and System Design.
